LEGROM[®]

Extremely rigid

Pressure resistant up to 15 bar

LEGROM[®]
VARIO
SYSTEM

Keep cool! The variable
segment hose system

www.legrom.com

Keep cool! The variable segment hose system

ONE idea - 1000 solutions:

The unmistakable green and yellow or black and yellow segments of the flexible hose system are your guarantee of quick and easy integration with your machines, production systems and other devices. Just as the segments of our hose system can be shaped to suit the required purpose, so does our company react to the needs of the market and the requirements of our customers. For over 25 years, we have been developing and marketing our high-quality and versatile system for long-term use in a wide variety of sectors and workplaces.

The rapidly increasing demands for faster machining speeds, superior surface qualities and a longer service life of machining tools coupled with immense cost pressure necessitate a thorough and targeted use of the coolants and lubricants required for:

[Turning](#) | [Drilling](#) | [Grinding](#) | [Milling](#) | [Eroding](#)

The **LEGROM VARIO SYSTEM®** can also be used for blowing away chips during the machining of workpieces as well as for quickly and accurately suctioning off fluids, dust, moisture and smoke. The versatility of our flexible hose system and its many combination possibilities are reflected in particular in custom designs:

Our development department with its expertise in mold construction and plastics processing enable us to react quickly and effectively to the special requirements of our customers.

Our fully-automatic installation of the flexible hose system guarantees both high bending strength and a constant high quality level.

Universal, flexible, precise

All components can also be found in our online shop at www.legrom.de

As the direct manufacturer of the LEGROM VARIO SYSTEM®, we also offer:

- » Manufacture of special components
- » Assembly and installation of special sets according to the customer's requirements
- » Short delivery times of all standard components within 24/48 h
- » Made in Germany

The LEGROM VARIO SYSTEM® is available in 3 different sizes: 1/4" | 1/2" | 3/4"

All sizes can be combined by using adapters, so that one or several nozzles can be attached simultaneously from just one connection. The flexibility of the individual system components enables random positioning and tight bend radii.

- » 1/4" R=29 mm
- » 1/2" R=38 mm
- » 3/4" R=45 mm

1/4" segment
7.0 mm

1/2" segment
12.7 mm

3/4" segment
18.5 mm

System	Bore diameter	Flow rate	Max. pressure*	Min. bend radius R
1/4"	7.0 mm	16 l/min	6 bar	29 mm
1/2"	12.7 mm	32 l/min	6 bar	38 mm
3/4"	18.5 mm	72 l/min	6 bar	45 mm

* Maximum pressure depends on various factors. e.g.:
Hose length | Nozzle size | Bend radius (according to Legrom testing methods)

A versatile system with a long list of benefits

- » Excellent chemical resistance
- » Flexibility and versatility
- » High production quality and efficiency
- » Quick to assemble / dismantle
- » Numerous combination possibilities
- » Acid-resistant design
- » Also available in V-0 in compliance with UL-94 (flame protection)
- » High bend resistance and position stability
- » High pressure resistance up to 15 bar

We guarantee best manufacturer quality

Benefit from the versatility and the numerous advantages of the **LEGROM VARIO SYSTEM®**: Whether hoses, nozzles, threaded connectors or valves, couplings and junctions – you are sure to find the right combination for your application in our range of components!

High-quality plastic

All **LEGROM VARIO SYSTEM®** components are manufactured from high-quality POM in our own injection-molding plant. This material is renowned for its excellent stability and bending stiffness as well as its excellent elasticity and low tendency to creep. **LEGROM VARIO SYSTEM®** components are non-conductive and thus ideal for eroding machines.

Maximum long-term usage temperature of 80°C and high chemical resistance

Ideally suited for lubricants, hydraulic fluids, coolants, fuels, ester, alcohol, ether and ketone.

Stable position

The extreme stability of the joints ensures that the **LEGROM VARIO SYSTEM®** remains directionally stable when subject to pressure surges and vibration of machinery.

Colours

Our standard version is available in green and yellow or black and yellow.

Resistant

Resistant to pressure up to 6 bar in the low pressure range for fluids and gases, in the high pressure range up to 15 bar thanks to our liner that is equipped with a special inner hose.

Quality assurance

We are certified according to DIN EN ISO 9001: 2008 and guarantee the high standard of the **LEGROM VARIO SYSTEM®**.

Quick to assemble and dismantle

Our unique assembly pliers make it easy to assemble or dismantle the **LEGROM VARIO SYSTEM®** components and to either lengthen or shorten the hoses as and when required.

The VARIO-Service

Feel free to consult us. Our service team will advise you on the right combination of **LEGROM VARIO SYSTEM®** components for your application.

Coolant equipment with top pump

- » 230/400 V Euro standard
- » 50 Hz
- » 0.12 kW
- » **CE**

Maximum throughput	Maximum pump lift	Tank	Outer dimensions [mm]	Order No.
2,940 l/h (49 l/min)	5.0 m/WS	30 l	400 x 300 x 170	500-004
2,940 l/h (49 l/min)	5.0 m/WS	40 l	400 x 300 x 220	500-005

» If requested, spare pumps can be provided with all coolant equipment.

Legrom presents a patented world first:

OUTLINEFLEX

The flexible straight flow nozzle

Despite the wide range of straight flow nozzles on the market, many users today have problems in finding one with the right profile to suit their grinding tool. To overcome this problem many nozzles are painstakingly soldered together. With **OUTLINEFLEX** this laborious work is a thing of the past. When opened with the grinding tool the nozzle blank automatically adapts exactly to the contour of the grinding tool!

The flexible straight flow nozzle **OUTLINEFLEX** with its intelligent parameters optimizes the cooling lubricant system. The nozzle shape that is adapted to the profile of the grinding tool and an opening cross-section that is dimensioned to correspond with the flow volume ensure a close-contoured, evenly discharged cooling lubricant. At the same time, the grinding wheel is optimally cleaned and the heat generation significantly reduced. Further benefits to the user are the high grinding quality and a considerable increase in the cutting capacity. The operator-friendly nozzle blank can be easily and quickly adapted to the machine without damaging the surface of the grinding wheel. Combined with the variable segment hose system **VARIO** by Legrom or other systems, **OUTLINEFLEX** meets the needs of virtually every application.

OUTLINEFLEX enables the exact setting of the gap between the grinding wheel and the nozzle blank, so that the flow conditions in the grinding gap, the contact volume flow and the pressure in the grinding gap can be directly influenced. High cooling lubricant volume flows which do not positively influence the

cooling effect in the contact zone can be detected and eliminated. The nozzle, which is adapted to suit the contour of the grinding tool, is extremely close to the grinding wheel. As a consequence, the air cushion surrounding the grinding wheel can be almost completely deflected. This considerably reduces the volume of coolant lubricant required, as no turbulence occurs. As only pure cooling lubricant is introduced to the contact surface, the quality of the grinding process is additionally enhanced as a result. The reduction of the cooling lubricant flow can also be exploited so that machines can be configured with a lower motor/pump capacity, thus making them more energy efficient.

- » Available as blank for flexible straight flow nozzle
- » Available as flexible straight flow nozzle according to your CAD data
- » Higher productivity, lower heat generation, better cleaning of grinding wheel hence longer service life of the grinding wheel
- » Lower compressive stress in the surface of the workpiece hence improved structure

We leave nothing to chance

The demands of our customers are our benchmark

Nothing is so good that it cannot be improved. We and our customers come face to face with this challenge every day.

The quality of our products and services is our top priority. In order to satisfy the demands of the market for continuously improving products, we are constantly working on identifying and implementing the best solutions from both a technical and economic point of view.

„Our goal is to find the most efficient - yet cost-effective solution - to every challenge we are set.“

Images: Pressure test (above) and Stiffness test (below)

Our team of highly skilled experts employs the latest computerized measuring and testing technology and provides comprehensive documentation to guarantee the consistent quality of our products and the satisfaction of our customers.
